What's ChatGPT Prompt?

ChatGPT (Chat Generative Pre-Trained Transformer) is an advanced AI-powered natural language processing technology that enables you to interact with chatbots in a human-like manner.

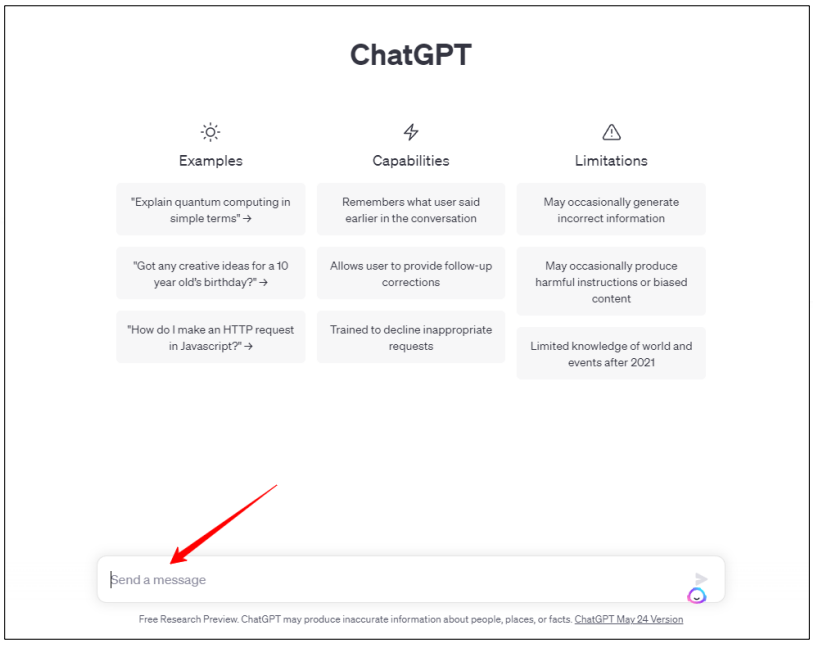

A prompt is any form of text, question, or information that communicates to AI what response you're looking for.

By providing ChatGPT with a specific prompt, you can generate text tailored to your needs, such as social media posts, emails, blog posts and other marketing materials.

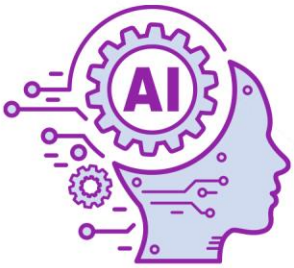

How To Get Started with ChatGPT?

You can get started using ChatGPT by going to chat.openai.com and creating an OpenAI account.

Once you are in, you can get your conversation started by typing in your prompt in the message box, and then watch AI do its magic.

How to Use This Guide

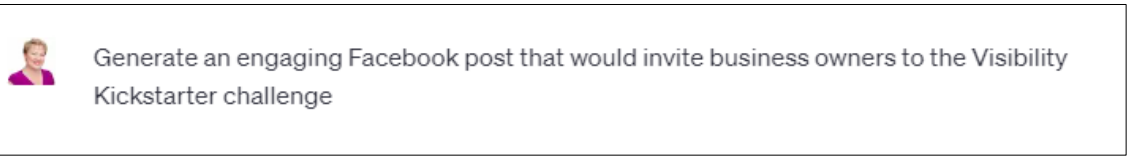

To take full advantage of this collection of prompts, first you need to get clear on:

1. The topic of your challenge
2. The name of your challenge
3. The ideal audience for your challenge
4. The promise of your challenge (the result or transformation it provides)
5. The problem your challenge is solving
6. The social media platform(s) you'll be using for promotion

Once you have clarity on all these points, you can use them to customize the prompt templates you'll find in this document.

Example:

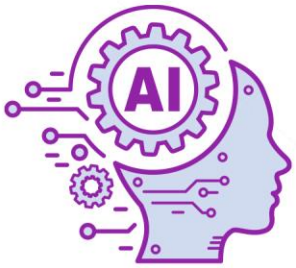

Prompt: Generate an engaging [social media platform] post that would invite [your audience] to the [name of your challenge]

ChatGPT has a unique feature that sets it apart from other chatbots - it "remembers" the conversation it's having with you. This means that you can ask ChatGPT to modify its response without having to repeat yourself or start over - ChatGPT will use your previous conversation as a foundation to build upon.

I highly recommend that you consider all ChatGPT outputs as the "first draft" and refine them to ensure that all information is correct and that it matches your voice and tone.
